Exercise 8-6 Variable Overhead Variances [LO8-6]

Logistics Solutions provides order fulfillment services for **dot.com** merchants. The company maintains warehouses that stock items carried by its **dot.com** clients. When a client receives an order from a customer, the order is forwarded to Logistics Solutions, which pulls the item from storage, packs it, and ships it to the customer. The company uses a predetermined variable overhead rate based on direct labor-hours.

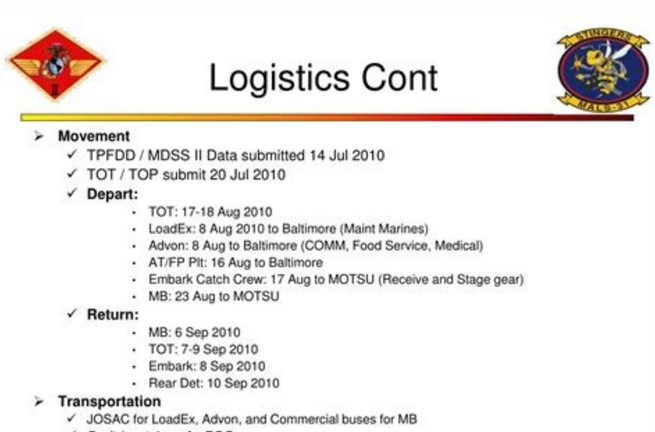
In the most recent month, 130,000 items were shipped to customers using 4,700 direct labor-hours. The company incurred a total of $13,630 in variable overhead costs.

According to the company's standards, 0.03 direct labor-hours are required to fulfill an order for one item and the variable overhead rate is $2.95 per direct labor-hour.

Required:

1. According to the standards, what variable overhead cost should have been incurred to fill the orders for the 130,000 items? How much does this differ from the actual variable overhead cost? **(Round labor-hours per item and overhead cost per hour to 2 decimal places.)**

Number of items shipped		
Standard direct labor-hours per item		
Total direct labor-hours allowed		
Standard variable overhead cost per hour		
Total standard variable overhead cost		
Actual variable overhead cost incurred		
Total standard variable overhead cost		
Total variable overhead variance		



Cof meaning in logistics. Cof full form of transportation.
